

Coin-Mech Upgrade

Are you ready?

The UK is set to see the introduction of a new £1 coin in March 2017. This will leave all electronic coin mechanisms in your laundry in need of firmware reprogramming to ensure they can accept the new coin. The impact of this on your business doesn't need to be a headache with JLA's Coin-Mech Upgrade service.

JLA's Coin Mech Upgrade is:

- **Convenient** – our engineers will reprogramme one machine at a time to ensure minimal downtime of machines
- **Cost-effective** – with fixed pricing, you know the exact amount you will need to pay
- **Simple** – our engineers do the hard work, so you don't have to

Upgrade applies to Munzprufer EMP500 mechanisms – if no upgrade is carried out, there will be no charge.
