

DISCOVER REMOTE HEATING MANAGEMENT

Our cloud-connected boilers enable us to take on the complexities of managing your commercial heating system - and ensure it runs at its best when you need it most.

App-connected boilers

Benefit from the ultimate in user friendly controls to cut down on physical machine operation.

Ideal for: Sites where plant rooms are hard or time-consuming to access physically, or you need to manage multiple sites from a single location.

Real-time monitoring

Access live machine data in the cloud from one central portal for efficiency analysis.

Ideal for: Owners and managers who need the transparency and convenience of up-to-date, at-a-glance information from all boilers.

Remote diagnostics

Your 24/7 JLA support hub team can identify and solve issues without the need for an engineer visit.

Ideal for: Facilities managers or operators who need a trusted partner to manage the complexities and demands of their heating system for them.

Live traffic light alert system

Live data shows our support hub if everything is working as it should - and flags issues to our service desk if not.

Ideal for: Businesses that rely heavily on heating and hot water, but have limited onsite resources to identify boiler issues or inefficiencies.

Compliance reporting

Get accurate usage data to ensure - and prove - that your business is meeting relevant obligations.

Ideal for: Care and healthcare settings who need the ability to easily log boiler usage and performance for audit trails.

Automated engineer call-outs

If hands-on help is needed, our fault alert tracker automatically dispatches an engineer before your business is impacted.

Ideal for: Keeping critical temperature control equipment running smoothly with minimum downtime and disruption to everyday operations.
