

HOW OTEX WORKS

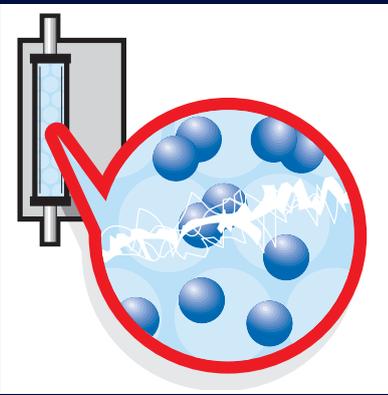

1

OTEX utilises an oxygen concentrator which takes in air and converts it to 90% pure oxygen

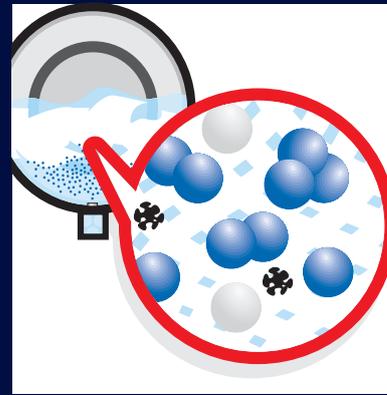

5

The ozone immediately attacks bacteria and soiling. It kills bacteria 3,200 times faster than chlorine bleach

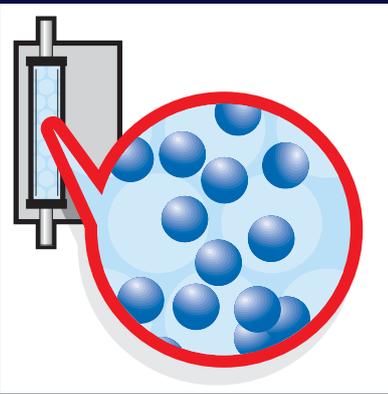

2

The oxygen we breathe is made up of two atoms paired together. An ozone generator separates the atoms with electrical arcs

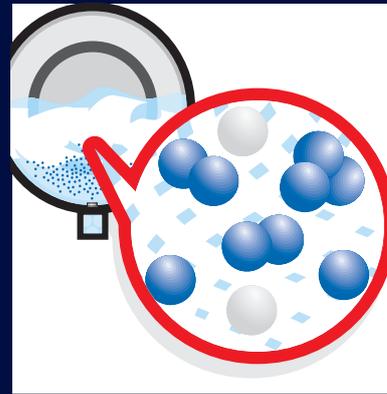

6

Fibres in materials are lifted, giving laundry a softer feel and prolonging its life

3

The atoms reassemble into groups of three - this is ozone, an environmentally friendly natural gas.

7

OTEX uses mostly cold water and is perfectly safe because the ozone it utilises quickly reverts back to oxygen

4

A unique interfusor makes the ozone soluble by defusing it into water in the washing machine drum

8

OTEX produces clean, fresh laundry totally free of bacteria on every cycle - completely eliminating the risk of human error.
